

Up to \$500K to Harden Your Campus

The DOJ COPS School Violence Prevention Program (SVPP) — a grant your district can apply for directly — and how the XSponse Guardian platform turns that funding into coordinated school safety.

NATIONAL FUNDING Up to ~\$73M	MAX AWARD \$500K · 25% match	WHO APPLIES Districts directly
----------------------------------	---------------------------------	-----------------------------------

The Opportunity

Authorized by the STOP School Violence Act of 2018, SVPP is a competitive DOJ grant that funds “hard” school security — technology and law-enforcement coordination. Unlike the SSE grant (states only), your district applies directly.

- Eligible applicants apply directly: public school districts, school boards, and law enforcement agencies (private/individual schools can benefit as sub-recipients).
- Up to \$500K per award over 36 months; 25% local match (waivable for hardship). Microgrants (≤\$100K) for rural, tribal & low-resourced schools are 100% federally funded.
- Funds security technology, expedited notification, and coordination — but not facial recognition, license-plate readers, body cameras, or vehicles.

Why XSponse Fits the Grant

The XSponse Guardian platform unifies detection, access control, alerting, and mass notification — squarely inside SVPP’s allowable, evidence-based categories (and without facial recognition or LPR, which aren’t fundable):

SVPP ALLOWABLE CATEGORY	HOW XSPONSE DELIVERS
Deterrent measures (locks, cameras)	X-Detect & X-Protect: unified video and access control with instant, automated lockdowns
Expedited notification to police	X-Alert & X-Announce: panic activation and mass notification with 911 support
Coordination with law enforcement	X-Guardian & X-Integrate: interoperable, predefined response workflows
Visitor screening & entry control	Access control and visitor management that hardens every entry point

Built for This Moment

- Works with what you already own — XSponse is built by integrators to extend existing systems, keeping costs reasonable (a scored factor).
- Secure by design — end-to-end encrypted audio/video (WebRTC), hardwired PoE devices, role-based access, and full audit logging.
- Scoped to allowable costs — we build every SVPP proposal around fundable categories so your budget stays compliant.

Let’s build your SVPP application together.
