

# Up to \$500,000 Available for School Safety Improvements

The DOJ COPS School Violence Prevention Program (SVPP) — a grant your district can apply for directly — and how the XSponse Guardian platform turns that funding into coordinated school safety.

|                                                |                                               |                                                 |

| <b>NATIONAL FUNDING</b><br><b>Up to ~\$73M</b> | <b>MAX AWARD</b><br><b>\$500K · 25% match</b> | <b>WHO APPLIES</b><br><b>Districts directly</b> |
|------------------------------------------------|-----------------------------------------------|-------------------------------------------------|

## The Opportunity

Authorized by the STOP School Violence Act of 2018, SVPP is a competitive DOJ grant that funds “hard” school security — technology and law-enforcement coordination. Unlike the SSE grant (states only), your district applies directly.

- Eligible applicants apply directly: public school districts, school boards, and law enforcement agencies (private/individual schools can benefit as sub-recipients).
- Up to \$500K per award over 36 months; 25% local match (waivable for hardship). Microgrants (≤\$100K) for rural, tribal & low-resourced schools are 100% federally funded.
- Funds security technology, expedited notification, and coordination — but not facial recognition, license-plate readers, body cameras, or vehicles.

## Why XSponse Fits the Grant

The XSponse Guardian platform unifies detection, access control, alerting, and mass notification — squarely inside SVPP’s allowable, evidence-based categories (and without facial recognition or LPR, which aren’t fundable):

| SVPP ALLOWABLE CATEGORY             | HOW XSPONSE DELIVERS                                                                     |
|-------------------------------------|------------------------------------------------------------------------------------------|
| Deterrent measures (locks, cameras) | X-Detect & X-Protect: unified video and access control with instant, automated lockdowns |
| Expedited notification to police    | X-Alert & X-Announce: panic activation and mass notification with 911 support            |
| Coordination with law enforcement   | X-Guardian & X-Integrate: interoperable, predefined response workflows                   |
| Visitor screening & entry control   | Access control and visitor management that hardens every entry point                     |

## Built for This Moment

- **Works with what you already own** — XSponse is built by integrators to extend existing systems, keeping costs reasonable (a scored factor).
- **Secure by design** — end-to-end encrypted audio/video (WebRTC), hardwired PoE devices, role-based access, and full audit logging.
- **Scoped to allowable costs** — we build every SVPP proposal around fundable categories so your budget stays compliant.

### Let’s build your SVPP application together.
