

\$93M in Federal Grants to Make Schools Safer

The U.S. Department of Education’s School Safety Enhancement (SSE) Program — and how the XSponse Guardian platform turns that funding into a unified, life-saving response system.

TOTAL FUNDING \$93,000,000	AWARDS / RANGE ~30 · \$500K–\$5M	APPLICATION DEADLINE July 28, 2026
-------------------------------	-------------------------------------	---------------------------------------

The Opportunity

The SSE Program funds States to strengthen statewide school safety systems and the physical security of schools — directly modeled on the lessons of the DOJ’s Critical Incident Review of Robb Elementary (Uvalde). Grants flow to State Educational Agencies (SEAs), which subgrant to school districts to put proven safety technology in classrooms.

- Eligible applicants: State Educational Agencies (one application per state); districts receive funding through state subgrants.
- Allowable spending centers on secure entry, deterrents, emergency communications, response coordination, and active-threat training.
- Construction is not funded — but security technology, communication systems, and training are. That is exactly where XSponse delivers.

Why XSponse Fits the Grant

The XSponse Guardian platform unifies detection, alerting, access control, and mass notification into one AI-driven ecosystem — delivering actionable insights that enable immediate action and reaction. The grant’s allowable uses map directly to what XSponse does:

SSE ALLOWABLE USE	HOW XSPONSE DELIVERS
Emergency communication & mass-notification systems	X-Alert & X-Announce: real-time alerts and mass notification to staff, students, and first responders — with 911 support
Deterrent measures (security cameras)	X-Detect: AI-driven detection and unified video that triggers the right response in real time
Interior door locks & secure entry systems	X-Protect & X-Shield: integrated access control with automated lockdowns in seconds
Emergency response & coordination plans	X-Guardian: predefined, automated response workflows that coordinate every system and team at once
Training & preparedness exercises	X-Wearable badges for instant location tracking, plus drill and preparedness support for SROs and staff

Built for This Moment

- Built by integrators — fully PoE, easy to install, and designed to unify existing infrastructure instead of replacing it, stretching every grant dollar.
- Secure by design — end-to-end encrypted audio/video (WebRTC), hardwired PoE devices, role-based access, and full audit logging.
- Seconds save lives — XSponse shifts schools from fragmented, manual response to coordinated, automated action when it matters most.

Don’t leave funding on the table.

Talk to XSponse about a grant-ready safety plan for your district before the July 28, 2026 deadline. We’ll help you align with your state’s application and scope a solution that fits SSE allowable uses.
